DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

In claim 1, "the imaging optical system" lacks proper antecedent basis.

Furthermore, the phrase "between the two points is" does not make sense.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

In the abstract, Applicant is reminded that the abstract should only be one paragraph.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

2. The following is a statement of reasons for the indication of allowable subject matter: a method of automatic focusing as claimed, more specifically in combination with: imaging an opening of a field stop, allocating light and dark values to each intensity, determining a smallest rectangle and comparing a position of the center of the rectangle to a center point of an image the field stop in the focused state, is not disclosed or made obvious by the prior art of record.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Neumann et al. (U.S. Patent 4,798,948) discloses a field stop for

an autofocus optical device.
